

Web Browsing using Hierarchy Visualisations

Kirill Nevzorov

November 12, 2025

1 Outline 17/03/2025

- tree page CLI application
- graphbrowser quarkus backend
- report

2 Tree Page CLI Application

- Name of the application (treepage -> pagerts)
- Terminology (resource or relation)
- Functionality of the application (query external resources)
- Model (json list)
- Missing features (statistics)
- Future work (pagerts -> pagerrs)

2.1 Project Name

- treepage -> pagerts

2.2 Terminology

- application for querying external resources

...

- resources?
- relations?
- valency of a node?

2.3 Functionality

- the application queries a website for a hierarchy of pages
- performs cross domain lookups
- returns a JSON node list of 1 page depth from starting node

3 Model

- Is a JSON list sufficient to represent a tree structure?

3.1 Missing Features

- statistics such as:
 - valency of a node
 - number of images
 - number of links
 - number of words per page

4 Hyperbrowser Electron Desktop App

- development paused

5 Graphbrowser Quarkus Backend

- Name of the application:
 - graphbrowser is good
- current status fine grained:
 - tooling issue with testing
- global status:
 - implementation of command line runner

5.1 Current Status

- development paused due to a issue with the build system
- technology stack finalised
- tests are in progress
- implementation is in progress
- visualisation code not yet started

6 Conclusion
