- tree page CLI application
- graphbrowser quarkus backend
- report

Tree Page CLI Application

Project Name

- treepage -> pagerts

Terminology

- application for querying external resources

Tree Page CLI Application

Project Name

- treepage -> pagerts

Terminology

- application for querying external resources
- resources?
- relations?
- valency of a node?

Functionality

- the application queries a website for a hierarchy of pages
- performs cross domain lookups
- returns a JSON node list of 1 page depth from starting node

- Is a JSON list sufficient to represent a tree structure?

Missing Features

- statistics such as:
 - valency of a node
 - number of images
 - number of links
 - number of words per page

Hyperbrowser Electron Desktop App

- development paused

Graphbrowser Quarkus Backend

Current Status

- development paused due to a issue with the build system
- technology stack finalised
- tests are in progress
- implementation is in progress
- visualisation code not yet started
